

CONCEPT USED: <1> Know to connect the MULTIPLE LED with ardunio and breadboard.

<2>code to apply MULTPLE LED in order to BLINCKING IN UNIQUE PATTERN.

LEARNING AND OBSERVATION:<1>We have learn about the CODE FOR MULTIPLE LED and knows its functionility.

<2>we learn about breadbord circuit design and ardunio embedded system.

PROBLEM AND TROUBLESHOOTING:<1>all the connectivity should be fully tight and should in working condition so, before using it once u have to check it properly.

PRECAUTION :<1>We shold handle it properly so that nothing can be distorted.

<2>we should keep our connectivity neat and simple ,it should not be more complex.

LEARNING OUTCOMES:<1>we come to know the desire information about how the SAME TYPE OF MULIPLE electrical element are being controlled by ARDUNIO.
